Chestnut Meat IgG

Order Name: CHESTNUT G

Test Number: 5500487
Revision Date: 12/14/2022

TEST NAME			METHODOLOGY	LOINC CODE
Chestnut Meat IgG	6		Enzyme immunoassay (EIA)	
SPECIMEN REQU	UREMENTS			
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment
Preferred	0.3 mL (0.1 mL)	Serum	Clot Activator SST	Room Temperature
Instructions	Specimen Type: Red-top tube Specimen Storage: Room ten Specimen Collection: Not Ava Special Instructions: Values on one assay method be used cor	nperature ailable obtained with different assay m	,	in serial testing. It is recommended that only

Specimen Stability: Ambient: Not Available, Refrigerated : Not Available, Frozen: Not Available

GENERAL INFORMATION				
Expected TAT	2 - 4 days			
Clinical Use	The clinical utility of food-specific IgG tests has not been established. These tests can be used in special clinical situations to select foods for evaluation by diet elimination and challenge in patients who have food-related complaints. It should be recognized that the presence of food-specific IgG alone cannot be taken as evidence of food allergy and only indicates immunologic sensitization by the food allergen in question. This test should only be ordered by physicians who recognize the limitations of the test. The reference range listed on the report is the lower limit of quantitation for the assay.
